

## LabDiet® Select Verified Rodent Diets

*LabDiet® Select Verified Rodent Diets are researched, innovative, and multifaceted formulas designed to meet the unique research requirements within your institution.*

### Managed Formulation delivers Constant Nutrition®

- Managed Formulation minimizes nutrient variability seen in less judicious Fixed & Least Cost feed options.
- Our process begins with strict ingredient specifications and testing, a diligent manufacturing process, and finished product testing - all of this because we know how important animal diet is to your research.

### Managed Soybean Levels

- The Select Verified rodent diets contain no soybean meal (5V5M & 5V5R) or less than 2% soybean meal (5V75) for target levels of TOTAL dietary isoflavones between 50 - 75 ppm.

### You Want Results

- Isoflavone analysis results provided for every batch of diet – this includes daidzein, glycitein and genistein aglycone units.
- Analysis reports are not typically provided by other companies and they may not report the three primary phytoestrogens.

### Alfalfa-Free for Imaging Studies

- Select Verified rodent diets are research-proven to be the ideal and preferred grainbased diets for imaging studies.
- See the report: *The Impact of Laboratory Animal Diets on Auto-fluorescence Imaging in Animals* for further details.

### Contains No Fish Meal

- Many LabDiet® products contain small amounts of high quality menhaden fish meal, which is an excellent source of natural amino acids for rodents. They are supplied in the exact proportions animals require.
- We have removed fish meal from the Select Verified rodent diets, so that customers currently feeding diets without fish meal can transition their animals to these diets seamlessly.

### Product Texture Options

- Pelleted or Extruded versions available.
- Both options are the same size kibble and available in standard, autoclavable, and irradiated forms.

### Packaging Integrity

- Select Verified rodent diets are irradiated to reduce the bioburden and eliminate the need for autoclaving.
- Our durable PicoLab® Valeron® bags ensure your product is safe from the time of manufacturing until you open the bag at your facility.
