

Mouse Diet 9F

5020

DESCRIPTION

Mouse Diet 9F is formulated with 20% protein and 9% fat. It is designed for mouse colonies that may benefit from additional energy to maximize production in post-partum breeding, are exposed to higher stress levels, or many transgenic strains. This diet is a complete life cycle diet formulated using managed formulation, delivering Constant Nutrition®. This is paired with the selection of highest quality ingredients to assure minimal inherent biological variation in long-term studies. LabDiet® 5020 is offered in a non-irradiated pellet or meal; extruded and/or irradiated/autoclavable options also available.

Features and Benefits

- [Managed Formulation delivers Constant Nutrition®](#)
- High quality animal protein added to create a superior balance of amino acids for optimum performance
- Designed to meet the energy needs of breeding mouse colonies, mice exposed to higher stress levels, and transgenic strains.
- LabDiet® 5020 is a non-irradiated equivalent to 5058.

FEEDING DIRECTIONS

Mouse Diet 9F should be fed to breeders and lactating mice on a free-choice basis. Plenty of fresh, clean water should be available to the animals at all times.

Mice-Adult mice will eat up to 5 grams of pelleted ration daily. Some of the larger strains may eat as much as 8 grams per day per animal, especially during heavy lactation. Feed should be available on a free choice basis in wire feeders above the floor of the cage.

1. Formulation based on calculated values from the latest ingredient analysis information. Since nutrient composition of natural ingredients varies and some nutrient loss will occur due to manufacturing processes, analysis will differ accordingly.

2. Nutrients expressed as percent of ration except where otherwise indicated. Moisture content is assumed to be 10.0% for the purpose of calculations.

3. NDF = approximately cellulose, hemi-cellulose and lignin.

4. ADF = approximately cellulose and lignin.

5. Physiological Fuel Value (kcal/gm) = Sum of decimal fractions of protein, fat and carbohydrate (use Nitrogen Free Extract) x 4.94 kcal/gm respectively.

NOTE: When assayed, actual levels may vary from calculated values.
